Carbon Monoxide (CO) the silent killer

Carbon monoxide is an invisible, almost undetectable threat to your family and home. Potential sources for CO include your fireplace, wood stove, furnace, water heater, gas dryer or stove, vehicles, grill or space heater.

- CO is the leading cause of poisoning deaths in North America
- On average, nearly 11,000 people are treated annually for CO poisoning
- CO causes over 400 unintentional deaths annually

Store bought detectors require diligent battery replacement and 20% fail to work. Builder-installed devices still require you to maintain them (batteries) and if electricity is down, your detector may not function.

24-Hour Monitored CO Detectors and Life Safety systems provide security and peace of mind:

- 24 hour monitoring
- emergency help is called even when you can't call
- system battery back-up in case of power failure
- UL listed system detectors
- professional installation
- photoelectric and ionization technology may provide the earliest warning of most common types of fires

Our advanced technology detectors alert you to the first signs of trouble and signal the monitoring station to send help at the earliest moments of a fire or CO emergency.

If you would like to learn more about CO and smoke detection and monitoring, please complete the attached form above and mail it back with your payment.

We will contact you with more info about this service.
